**groHome – 2007 Aggie Solar Decathlon**

groHome is a small home with big ideas. Going far beyond competition requirements of a completely solar powered single bedroom residence, we explored an open building systems approach that strives to create an architecture that is participatory, sustainable, DIY and *groable*.

This approach is characterized by a library or catalogue of components that are all pre-manufactured, brought to site and assembled quickly, easily and efficiently. Elimination of on-site fabrication limits the environmental impact to the site, affords greater accuracy in construction and allows buildings to be deployed faster. The aesthetic of the building is derived from our aim to embrace the modular and componentized nature of the building system. Solar technology is used throughout in ways intended to celebrate the technology.

Team Sponsorship:

- Provides support for student team travel to and living expenses in Washington D.C.
- Supports transportation of Texas A&M entry to Washington and construction on the National Mall.
- Recognized in all team literature, advertising, web site (linked to U.S. Department of Energy web site), t-shirts, and Texas A&M College of Architecture publications.
- Recognized in thank-you advertisements in Texas Aggie and Texas Architect magazines.
- Invitation to Solar D build day and Washington Aggie Team events.

Competition Sponsor:

All of the above plus logo recognition in all publications, web site, and advertisements.

Opportunity to be exclusive sponsor of one of the 10 Solar Decathlon contests:

- 1) Architecture
- 2) Engineering
- 3) Market Viability
- 4) Communications
- 5) Comfort Zone
- 6) Appliances
- 7) Hot Water
- 8) Lighting
- 9) Energy Balance
- 10) Getting Around
